

FERTILITY

*Saliva Hormone Testing
& Human Identical Hormones*

BECOME PREGNANT AND STAY PREGNANT NATURALLY BY BUILDING YOUR UTERINE LINING PROPERLY

For 20 years in the USA, doctors have had available the knowledge and the technology to be able to test **JUST THE ACTIVE HORMONES CIRCULATING IN YOUR BODY.** And that makes all the difference in the world. The standard lab, testing your blood will tell you your hormone levels, but as a hormone “total” that combines your active and inactive hormone in one number. This throws us far off track. A woman can be told that she has normal estrogen when she is really low in active estrogen but because she has so much extra inactive estrogen, the total number looks normal. You need to test your saliva to know what your “active” hormone levels are. This technology is scientifically recognized and has been published in medical journals for the last 20 years.

Once your “true” “active” hormone level is determined by testing your saliva you are ready to begin a serious but healthy treatment plan that has a 70% success rate at normalizing your LH, FSH, your uterine lining and helping you get pregnant and stay pregnant.

How is this done? You collect your saliva in special tubes on 11 different days of your monthly cycle. When you have collected all of the samples, you send them by express mail to the U.S. to their biggest and most precise saliva testing laboratory that tests _ million profiles per year. About 2 weeks from the time you mail in your samples, your test results are received. They consist of graphs and different analyses of what is exactly happening to your hormones throughout the month. It shows exactly where the defect is in your hormonal system that is not allowing you to become pregnant. In order to have the best chance of becoming pregnant, your adrenal hormones and thyroid hormones are also analyzed.

Now starts the Natural medical treatment. A personalized program that uses Human Identical hormones will be prescribed. It is derived from Mexican Wild Yams and is exactly identical to your own body’s hormones. It is prescribed to you in the form of creams, pills and drops. Your schedule will be determined according to your own needs as was seen from your saliva test. Once your body gets these natural hormones in the right amounts cycling, your FSH and LH levels normalize and your endometrium becomes proper for implantation and for carrying your pregnancy, with G-d’s help.
